

MAP Growth Assessment 2025-2026

Understanding the assessment and
determining the effectiveness across
Algebra 1, Geometry, and Algebra 2 courses.

Average Scores

Assessment was given in the Fall, Winter, and Spring and was measured using an overall score and a percentile compared to other students throughout the country.

Fall

228.2

39th

Winter

230.1

36th

Spring

240.4

47th

Overall growth

12.2 points

8 percentiles

Distribution of Scores

Students were grouped using a range of scores:

Blue = 261 and above

Green = 241-260

Yellow = 221-240

Orange = 201-220

Red = 200 and below

Students who did not take the assessment were given **NO SCORE**

Fall

2.9%

12.9%

52.9%

31.4%

0

14 students
absent

Winter

5.1%

15.3%

54.2%

25.4%

1

24 students
absent

Spring

13.6%

36.4%

45.5%

4.5%

0

62 students
absent

Distribution of Growth

Students were categorized by their growth over the three assessment windows. If a student only had two scores, their growth was measured based on those scores. Students with only one score were ignored for this analysis.

Fall → Winter

Winter → Spring

Fall → Spring

Significant (5+)

24.6%

22.2%

50%

Slight (1-4)

29.8%

44.4%

27.8%

None (0)

Decreased (-)

43.9%

16.7%

22.2%

Average Rate of Growth:

1.2 points

Median Rate of Growth:

2 points

Range of Growth:

36 points

(-18 to +18)

Growth vs. Achievement

Student scores were compared to other students who took the same assessment and categorized into percentiles. This measurement of achievement was compared to the students' level of growth.

Percentile	% Positive	Average Improvement	Range of Improvement	Median Improvement
90th & Above	67%	+6.7	0 to 11	+9
64th - 89th	88%	+4.2	-6 to 18	+2
29th - 63rd	75%	+3.2	-11 to 12	+4
7th - 28th	44%	-1.6	-18 to 14	-2
6th & Below	0%	-4	-8 to -3	-2.5

Conclusions

- ★ Students had an overall growth of 12.2 points from the fall to the spring. The average rate of growth was 1.2 points
- ★ The majority of students in all test administrations placed in yellow range (221-240)
- ★ From fall to winter, the majority of students scores decreased
- ★ From winter to spring, the majority of students had slightly increased scores
- ★ From fall to spring, the majority of students had significantly increased scores (note that most students did not sit for the spring test administration)
- ★ High achieving students had the most growth and low achieving students had the most decline
- ★ **The assessment matches the level of achievement of the students, so higher achieving students are more likely to succeed and growth on the assessment than low achieving students.**

Does this conclusion reflect what we know about student knowledge of classroom content?
